

ABOUT POWERTECH

- Founded in 1979
- Subsidiary of BC Hydro
- Large multidisciplinary laboratory, 11-acre site (200,000 sqft.) with 15 primary labs
- Over 30 years of specialized engineering experience
- 220 employees, technologists, professional engineers and PhDs
- We offer quality services for testing, consulting and products

QUALITY POLICY

Our Quality Policy is to continually improve all products and services to satisfy customer needs and to do so efficiently while meeting or exceeding the requirements of good laboratory practice, sound engineering principles, applicable standards, statutes and regulations.

As employees, we are collectively responsible for implementing our policies and procedures while maintaining impartiality, confidentiality and proficiency in delivering our products and services.

Powertech

THE POWERTECH ADVANTAGE

In-depth experience – more than 30 years of experience, and deep knowledge of industries to meet the latest standards and solve complex problems.

State-of-the-art facilities – 15 primary labs, with the latest test equipment and staff expertise in high voltage and power, mechanical technology, applied chemistry and materials, gas systems engineering, civil engineering, software technology, and power systems.

Cross-disciplinary analysis – close collaboration between technical disciplines enables across-the-board,

end-to-end testing of products, components, and materials.

Pioneering innovations – ground-breaking firsts that have been adopted by industries around the globe, and that have changed the ways companies operate.

Global customer base – more than 300 clients on six continents, including some of the largest and most technologically advanced utilities, grid operators, and OEMs in the world.

Canada Grid Modernization Overview

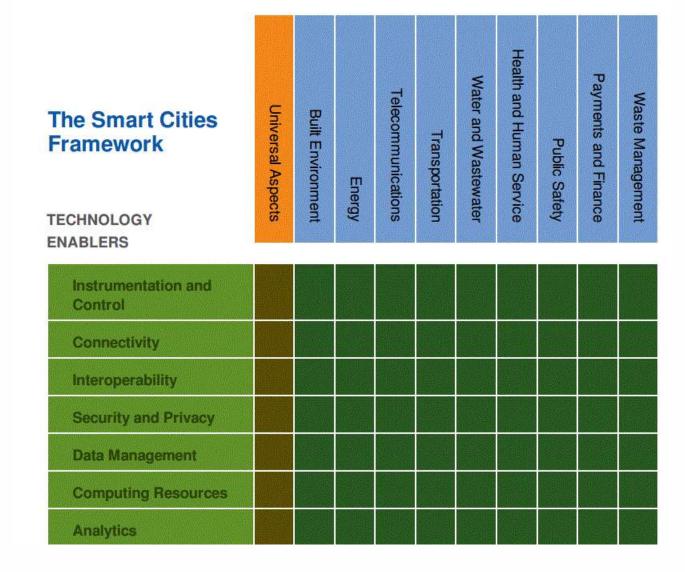

*includes Energy Management System

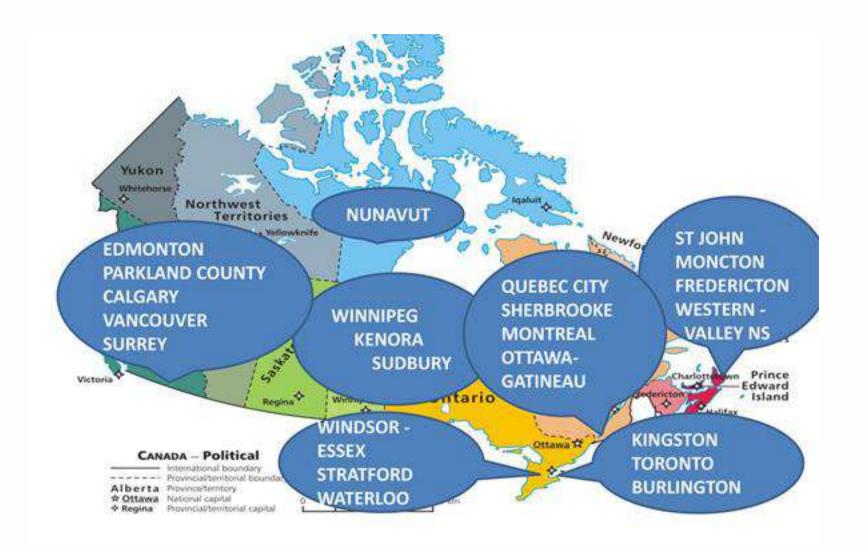

Source: BC Hydro, NRCan

"SMARTNESS" IN A CITY/COMMUNITY

CANADA'S INTELLIGENT COMMUNITIES

WE ALL HAVE GOOD REASONS

- Utilities: modernize aging infrastructure, maintain reliability, increase safety, reduce cost, fight competition, DER, increased weather events, wildfires
- Policy makers: protect energy access, regulate rates, provide societal benefits, standardize
- Communities: resilient energy, economic development, reduce costs
- Prosumers: flexibility, reduce costs
- Suppliers: create and sell products, fight competition, stay relevant

HOW TO MODERNIZE?

POLICY ELEMENTS

- Business models for a viable utility and viable prosumer
- Security and reliability
- Cost recovery for ancillary services, stranded assets and last mile
- Tariff support for load classes, time of use and value-add
- Affordability and societal responsibility
- Environment and community support

ECONOMICS

- Declining DER costs
- Electrification and load growth (e.g., EV, smart port, smart airports)
- Automation and cost efficiency/affordability
- Compliance costs and penalties
- Geographically dispersed VPPs become viable
- Increased need for climate change resiliency
- Who pays for what and who owns that
- BOO/BOT
- DSO, CCA, disruptions from new entrants

Powertech Grid Modernization Technology Projects

- Distribution automation
- Ubiquitous communication network
- Demand response and grid impact management
- VPP and microgrid
- Block chain for settlements and billing
- Sensors to gather real time data
- Al, drones and geo-mapping
- System visibility and control
- Wearable safety
- Accurate maps and data
- Wild-fire characterization and mitigation

MODERNIZE ASSETS AND SERVICES ACROSS THE VALUE CHAIN

GRID MODERNIZATION AT POWERTECH

CRITICAL INFRASTRUCTURE COMMUNICATIONS	DISTRIBUTION AUTOMATION
Utility telecom	Line devices
WiMax certification	Switchgear
AeroMACS certification	SCADA
Public safety networks	Device Management
MOBILE APPS FOR FIELD	NERC-CIP
Asset inspection	GRID IMPACT
Telecom/DA site assessment	Demand response of EV
Meter troubleshooting	Industrial and commercial energy management
New area for growth	Load shaping

TRANSFORMER OIL SAMPLING FOR PCBS: POLE-TOP AND UNDERGROUND (PADMOUNT)

The Power of Trust. The Future of Energy.

THE DISTRIBUTION TRANSFORMER SAMPLING CHALLENGE

How do you get an oil sample from a device not designed for easy oil sampling?

- Do it energized
- Thousands and thousands of times
- Ensure not to decrease life of transformer

WHY SAMPLE DISTRIBUTION TRANSFORMERS?

Brazil and Canada Regulations

- > 50ppm of PCB must be removed/replaced
- December 31, 2025 deadline

Affects everything other than cables

- Transformers pole-top and underground
- Reclosers, sectionalizers, capacitors
- Light ballasts
- Metering transformers
- Customer vaults

Transformers

- Which ones? Where are they?
- Replace? Replace only affected ones?

OTHER SOLUTIONS?

POWERTECH SOLUTION

Drill → **Punch** → **Sample** → **Seal** → **Paint**

POWERTECH SOLUTION

BC HYDRO PROGRAM REVIEW

Inspect

- Pre-inspection to verify age, type, etc.
- Need to be sampled?

Extract

- Extracted Live Line
- (small fraction sampled de-energized)

Analyze

Samples are brought to PLI for analysis

Report

• > 50 (43) ppm of PCB, transformer is replaced

THE BC HYDRO 2025 CHALLENGE

Pole-tops	Approx. Number
Remaining Typ. About 70% are sampled	70,000
Sampled to Date With Powertech System	30,000

Underground	Approx. Number
Remaining Typ. About 70% are sampled	5,500
Sampled to Date With Powertech System	Just started this Month

CONTINUED DIAGNOSTICS

Collecting a sample from sealed systems is challenging.

Get the most out of the collected sample:

- Metal analysis
- Furan screen
- Volatiles analysis
- Oil and paper health screen
